

**The new salad washer KW-81A from Kronen:
Innovative technology for mouthwatering clean food.**

**For your peace of mind:
Only perfectly clean salads,
fruit and vegetables will get
onto plates and trays.**

We at Kronen put 35 years of experience in kitchen and industry into our new vegetable washer KW-81A. It features adjustable washing performance and a timer for heavily or lightly soiled salads. You can also just rinse clean non-soiled salads from the greenhouse in running water. After the washing cycle we give it a good and efficient spin!

Like nature - your salads, fruit and vegetable come in all shapes and sizes! You can choose the right program with the push of a button - the rest will be done by our KW-81A.

The innovative technology of our washer model will take care of particles which collect on the surface of the water - like insects - as well as sand and dirt which sink to the bottom. We are not trying to do the impossible (like washing a whole case of lettuce in a mere three liters of water!) - it is our aim to achieve perfectly clean salads which are a joy to eat!

Using the machine is simple: choose your program with the plus/minus button, then choose the washing intensity - that's it! One more thing don't forget to remove the produce after 7-12 minutes!!!

Insects, wood particles etc. swim on the surface of the water. Sand and dirt collect at the bottom. The KW 81A's filtering system will account for that: the filter at the side collects the floating particles, the one at the bottom collects the heavier dirt.

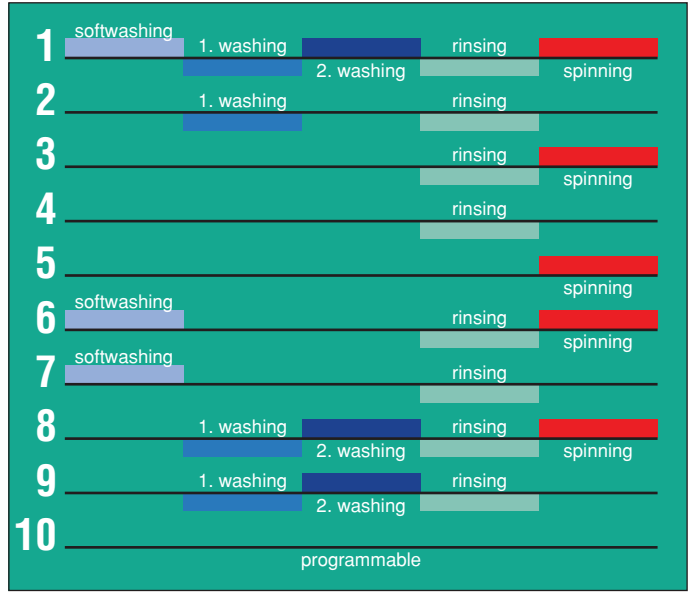

The inside is designed for easy cleaning: with rounded corners and completely accessible. We've thought of everything: there is even a water outlet so you can plug in a water jet for thorough cleaning.

The basket insert is also made from stainless steel, with 8mm holes - because it suits a huge variety of needs. Two baskets are standard issue with every washer.

Technical data:

Nine different washing cycles: just choose one and press the button! On the inside of the lid you'll find information about which program to use: be it the rinsing program which cleans by gently moving the water or by using the variable water jets for more heavily soiled produce. You can follow the program on the display.

This is what hygiene really looks like: stainless steel inside, rounded corners and edges, water jets at the bottom and at the sides, also made from stainless steel. Everything is easily accessible, no need for special tools if you want to take it apart for thorough cleaning.
